## rear wheel

width holes

Roadbike-rear hubs are available with Shimano 11S freewheel body (for Shimano and Sram 11 speed cassettes, respectively by using a 1.8mm spacer also for 9/10 speed cassettes) or with Campagnolo freewheel body (for Campagnolo 9, 10 or 11 speed cassettes)

Mountainbike-rear hubs are available with 10S freewheel body or with Sram 11S freewheel body (for Sram XX1, X01, X1) - please take care that Shimano 11 speed MTB cassettes could be used with the normal 10 speed freewheel body

Please name the required freewheel body when ordering - all freewheel bodies are available without additional charge

## Road bike &amp; MTB rim brake fronthubs

\*The new free wheel-body of the road hubs is compatible with Shimano and SRAM 11-speed. Using a 9/10-speed cassette the spacer 1.8mm is needed! This spacer will ONLY be for FREE if a 9/10-speed use is specified in your order. For more informations on using this spacer 1.8mm and the new 11-speed conversion-kits please check our website!

Spacer 1.8mm, for 10-speed**			2 g	4,40 €

## wheel-sets – for self compilation

## spokes

diameter colour

Composition: Basically, you can compose tune wheel-sets according to your wishes. Here you will find a large selection of possibilities including information, weights and prices. We like to provide you individually and make you an offer.

- The spokes weight refers to a length of 260mm included nipple. Unfortunately there are also spoke weight fluctuations of 2%!
- Nipples: Tune preferably processes aluminum nipples (weight for diameter 2mm with a length of 12mm = 0.3 g, 14mm = 0.32 g (carbon rims), for diameter 1.8mm with a length of 12mm = 0,35g)
- Nipples for Superspoke: Ø1,8mm only available in the following colours: black, red, silver and gold
- Explanation of the difference between black-chrome and black-oxidized:

Black chrome coating is an often misunderstood term for two different manufacturing techniques:

The "real" black chrome coating is an electrolytic plating process, in which a chrome coating is created on the surface. In this process a black colour pigment is introduced.

The end result is a shiny, black and durable surface finish. The cheaper black chromating process is an oxidation process, in which the spoke containing chrome and nickel is activated with an acid.

These receptive metals are then oxidised with a caustic solution and coloured black. Black oxides are created which are not a metallic chrome. The result is a matt black surface which is more susceptible to wear than the real black chrome coating.

<b>SAPIM D-Light</b> , black-oxidized	2,0/1,65/2,0	sw	5,1 g	0,60 €
<b>DT Competition</b> ,	2,0/1,8/2,0	sw / si	6,2 g	0,70 €
<b>DT Revolution</b> , (not for Disc wheel-sets)	2,0/1,5/2,0	sw / si	4,6 g	0,80 €
<b>SAPIM CX-RAY</b> , forged bladed spoke, black-chrome	2,0/0,9/2,0	sw	4,7 g	2,60 €
<b>SAPIM CX-RAY straight</b> , forged bladed spoke, black-chrome	2,0/0,9/2,0	sw	4,7 g	2,74 €
<b>SAPIM Superspoke</b> , exklusive by Tune, black-chrome	1,8/1,4/1,8	sw	4,1 g	3,40 €
<b>SAPIM Superspoke straight</b> , exklusive by Tune, black-chrome	1,8/1,4/1,8	sw	4,0 g	3,40 €
